

YUEJIA LI

Undergraduate, Computer Science and Technology (Hongyi Honor Class), Wuhan University

Phone: (+86) 152 7216 1950 | 2024302111194@whu.edu.cn | [GitHub](#) | [Website](#) | [Google Scholar](#)

RESEARCH INTERESTS

Representation learning; explainable AI (XAI); AI for social science; multimodal learning.

EDUCATION

Wuhan University - Computer Science and Technology (Hongyi Honor Class)

Sep 2024 - Jun 2028
(expected)

- Undergraduate student. Average score: 88.5/100. Advised by Prof. Mang Ye.

RESEARCH EXPERIENCE AND PUBLICATIONS

Microsoft Research Asia - Star of Tomorrow Research Intern

Summer 2026 (completed)

Mentor: [Fangzhao Wu](#)

- Worked on language models and model alignment.

Cross-Species Animal Re-Identification with Semantic Consistency Learning

ECCV 2026

Shuoyi Chen*, **Yuejia Li***, Mang Ye | * Equal contribution

- Proposed Semantic Consistency Learning, combining foreground-background decoupled spectral normalization (FDSNorm) and cross-species neighborhood modeling (CNM).
- Evaluated on 11 public datasets spanning 40+ species under two standardized protocols; achieved the best Rank-1 and mAP on 8 of 10 unseen datasets.

See Before You Code: Learning Visual Priors for Spatially Aware Educational Animation Generation

arXiv 2026

Yuejia Li*, Ke He*, Junheng Li, Shutong Chen, Jingkang Xia, Zhiyue Su, Junchi Zhang, Mang Ye | * Equal contribution

- Introduced OmniManim, a render-feedback-aware framework with explicit visual planning, structured post-render diagnostics, and localized repair for educational animation generation.

FedDiG: Federated Continual Graph Learning with Disentangled Generative Replay

Under review

Yuejia Li*, Zihan Tan*, Wenke Huang, Jinhe Bi, Bin Yang, Mang Ye | * Equal contribution

- Formalized semantic overlap and structural forgetting in federated continual graph learning; proposed gradient-driven feature disentanglement, topology-preserving generative replay, and server-side dual-channel distillation.
- On seven benchmarks, reported 54.03% average accuracy (+12.33 percentage points over the strongest baseline) and 14.83% average forgetting.

AI-Assisted Learning Silently Degrades Metacognition: Detection, Quantification, and Reversal

In progress

Yuejia Li, Synesis AI | Supervisor: Mang Ye

- Studied illusions of understanding, loss of active knowledge generation, and metacognitive dysregulation in AI-assisted learning.
- Developed a four-latent-variable Bayesian cognitive model, five-dimensional behavioral observation framework, pseudo-understanding risk index (PMI), and a POMDP-based cognitive protection intervention system.
- Led theoretical modeling; the team built a system prototype and completed small-scale experimental validation.

PROJECTS AND OPEN SOURCE

Synesis AI - Co-founder and Technical Lead

Jul 2025 - present

- Co-founded an AI education venture collaborating with schools and education organizations and pursuing seed funding.
- Built intelligent learning products for instructional understanding, knowledge organization, multi-turn teaching interactions, and classroom support.
- Integrated Manim and GeoGebra generation with multimodal teaching and cognition-aware agents to strengthen independent understanding and reduce cognitive offloading.

DeepGraph - Creator

2026 - present

- Built an end-to-end research agent for literature discovery, paper parsing, research question identification, proposal generation, and experiment planning.
- Integrated arXiv discovery, PDF parsing, structured LLM extraction, graph/evidence storage, opportunity briefs, and code execution into one closed-loop workflow.
- Supported code generation, automated tests, iterative revisions, and result collection across the research pipeline.

ClawOSS - Co-author

2026 - present

- Designed an open-source maintenance agent for repository scanning, task selection, bug reproduction, test completion, fix validation, and pull request submission.
- Extended OpenClaw with continuous workflows, parallel subagents, a telemetry dashboard, a PR ledger, and review follow-up.
- Project PRs have been merged by PyPI, OpenClaw, and ByteDance DeepFlow.

OpenClaw - Open-source contributor

2026 - present

- Contributed to agent workflow automation and engineering infrastructure for the OpenClaw platform.
- Worked on multi-agent execution, telemetry dashboards, and security constraints.

SELECTED RECOGNITION

NLPCC 2026 oral presentation: *Threshold-Stable Selective Classification for Freedom of Information Act Privilege Review*.
